There was some smuggling
439 of goods across the Libyan border, but this smuggling was done on a
648 very small scale. Before the Egyptian government imposed restrictions on imports, the prices of the goods in the Libyan market were close to their prices on the Egyptian market. Except for a very few items which were not found on the Egyptian market, smuggling goods from Libya offered
653 a very limited financial gain to the smugglers. In recent years, this situation has changed, however. With population increase in Egypt threatening disaster, and with the cultivable land in the valley reaching its maximum productivity, the attention of the government was drawn to the fertile yet dry land of the northern strip of the Western Desert as a possible means of expanding the cultivated area. A number of projects are taking place at the present time under the land reclamation act. The most important of these projects is the Eastern Mariut project which is directed toward the irrigation of the lands of the Western Desert through the channelling of the flood waters of the Nile into a network of canals covering an extensive area of the northern strip of the Western
315 Desert. Also, recently, oil has been discovered in the area, and since
457 the end of the Second World War, the area has been a major attraction for tourists.

439 More important is the increase in traffic of smuggled goods from
[651] Libya. Custom restrictions on imported goods to Egypt have created a
[656] scarcity of American and British manufactured goods which raised their price on the Egyptian market and made smuggling a profitable activity. An opposite-direction smuggling of sheep and goats from Egypt to Libya
[315] created a great shortage in the Egyptian meat market. Before the discovery of oil in Libya, the Western Desert area supplied the Egyptian

439 market with more than one-third of its lamb meat. The other two-
[315] thirds of the lamb market was supplied from the Sudan, the Delta, and
[315] from Libya. Oil industry in Libya attracted a large number of the young
[178] tribal members in Libya, who had originally undertaken the main task of
[464] sheep pastoralism. As a result, the population of sheep and goats in Libya dropped sharply. Not only did the Libyan market become unable to supply the Egyptian market, but it was also unable to support itself and was forced to pay high prices for the Western Desert sheep and goats.
[457] The price became even more attractive after the devaluation of the Egyptian pound which gave higher value to the Libyan currency, and hence, the price of sheep. In the last decade, the number of smuggled sheep reached a point where it created a great shortage of lamb meat in Egypt. All government attempts to stop smuggling activities in either direction have failed.

657 All these factors attracted the attention of the government to the area and its people. The need to control the tribal population became evident. But since it is difficult, if not impossible, to control a population which is constantly on the move, the first step the government took to control the tribal population was to settle them in permanent villages. A number of projects are underway. The aims of these
[654] projects are to increase the cultivated land and to improve the pastures
[137] by introducing new and highly nutritive pasture plants in areas where agriculture is not feasible. Attempts have also been made to promote local crafts and industries. The intentional efforts of the government
[178] to settle the tribal population is supplemented by the gradual drift of
[464] many tribesmen, especially the younger generation, to seek part-time or
